

SMART INDIA HACKATHON 2026

Pre-Qualifier Online Evaluation Round-II Rubric

TOTAL MARKS	TEAMS	TEAMS TO BE SHORTLISTED
50	300	150

1. Evaluation Criteria and Weightage

S. No.	Evaluation Criterion	Maximum Marks
1	Problem Statement Mapping and Requirement Coverage	5
2	Innovation and Competitive Advantage	7
3	Technical Architecture and Methodology	8
4	Functional Prototype and Live Demonstration	15
5	Validation, Testing and Evidence	5
6	Feasibility, Scalability and Impact	7
7	Presentation, Roadmap and Team Readiness	3
	TOTAL	50

2. Detailed Assessment Standards

2.1 Problem Statement Mapping and Requirement Coverage — 5 Marks

Excellent • 4-5	Directly addresses all major requirements, stakeholder needs and stated constraints.
Partially satisfactory • 2-3	Addresses the central problem but misses some requirements, stakeholders or constraints.
Weak • 0-1	Weak alignment or the solution does not address the core problem.

2.2 Innovation and Competitive Advantage — 7 Marks

Excellent • 6-7	Original solution with clear, relevant and justified advantages over existing alternatives.
Partially satisfactory • 3-5	Contains some innovative elements, but differentiation or comparative evidence is limited.
Weak • 0-2	Common solution, replication of an existing product or unsupported innovation claims.

2.3 Technical Architecture and Methodology — 8 Marks

Excellent • 7-8	Robust architecture, appropriate methodology, clear workflow and well-justified technology choices.
------------------------	---

Partially satisfactory • 4–6	Reasonable technical approach with integration gaps or insufficient technical justification.
Weak • 0–3	Unclear, unsuitable or technically incomplete architecture and methodology.

2.4 Functional Prototype and Live Demonstration — 15 Marks

Excellent • 12–15	Stable, end-to-end prototype demonstrates core functions using real or realistic inputs and verifiable outputs.
Partially satisfactory • 7–11	Partially functional prototype with incomplete modules, minor failures or simulated components.
Weak • 0–6	Static UI, mock-up, prerecorded concept or non-functional demonstration without a complete core workflow.

2.5 Validation, Testing and Evidence — 5 Marks

Excellent • 4–5	Performance claims are supported through test cases, metrics, comparisons and reliable evidence.
Partially satisfactory • 2–3	Basic testing is shown but test coverage, metrics or comparison is inadequate.
Weak • 0–1	No meaningful testing or evidence supports the claimed performance.

2.6 Feasibility, Scalability and Impact — 7 Marks

Excellent • 6–7	Technically and financially feasible, scalable, sustainable and capable of measurable stakeholder impact.
Partially satisfactory • 3–5	Generally feasible, but scalability, cost, adoption, sustainability or impact lacks depth.
Weak • 0–2	Unrealistic assumptions, limited impact or major deployment and sustainability concerns.

2.7 Presentation, Roadmap and Team Readiness — 3 Marks

Excellent • 3	Clear presentation, defined responsibilities, realistic milestones and a credible risk-mitigation plan.
Partially satisfactory • 2	Adequate presentation and broad roadmap, but important implementation details are missing.
Weak • 0–1	Unclear presentation, no credible roadmap or insufficient team preparedness.
